EDUCATION

Ajeenkya DY Patil School of Engineering

B.E. Computer Engineering — CGPA: 9.36/10

Pune, India

Expected Graduation: 2027

TECHNICAL SKILLS

Programming: Java, SQL, Python, C++, JavaScript

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Backend: Spring Boot, JDBC, REST APIs, Redis, Docker, Node.js, Express.js

Databases & Tools: MySQL, PostgreSQL, Git, GitHub, IntelliJ IDEA, VS Code

PROJECTS

Distributed URL Shortener System — Spring Boot, Redis, PostgreSQL, Docker

GitHub

- Built a scalable URL shortening service using Spring Boot, Redis, and PostgreSQL for efficient URL redirection workflows
- Implemented Redis caching, rate limiting, click analytics, and expiration handling achieving 99%+ cache-hit efficiency
- Designed REST APIs for URL shortening, redirect handling, analytics tracking, and custom alias support
- Containerized backend services using Docker and applied distributed system design principles for scalability

Student Management System — Java, MySQL, JDBC

GitHub

- Developed a menu-driven CRUD application using Core Java and JDBC with MySQL integration
- Applied DAO, POJO, and Singleton design patterns to improve modularity and database connection management
- Implemented PreparedStatement-based SQL queries for secure and efficient database operations
- Structured the application using layered package architecture with exception handling and input validation

AI-Powered Resume Screening System — Python, NLP, Machine Learning

GitHub

- Developed a resume screening system using NLP and semantic similarity techniques for automated resume matching
- Built modular pipelines for resume parsing, preprocessing, feature extraction, and relevance scoring
- Implemented TF-IDF vectorization and transformer embeddings for ranking resumes using cosine similarity
- Designed scalable workflows for automated candidate filtering and recruitment analysis

DATA STRUCTURES & COMPETITIVE PROGRAMMING

Solved 200+ algorithmic problems across LeetCode, CodeChef, and Codeforces.

Strong understanding of arrays, strings, hashing, binary search, recursion, sorting, STL, and problem-solving techniques.

Practiced time complexity optimization and implementation of efficient algorithms using Java and C++.

ACHIEVEMENTS

Winner — Blind Coding Competition (2024, 2025), ranked 1st among 100+ participants.

Winner — Code Hunt Competition (2024), solved 10 DSA challenges in a timed competitive contest.
